No.4

PDF

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/0416>]

DENTISTRY**EXPERIMENTAL ARTICLE**

1. Repair Shear Bond Strength of Aged
Provisional 3D-Printed Resin: Role of Repair
Materials

nutnawat laoknampu, Hatnairat Lekatana,
Jadesada Palasuk

Pages 1389-1394

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/1-D23_2860_Jadesada_Palasuk_Thailand.pdf]

EXPERIMENTAL ARTICLE

2. The Effect of Calcium Hydroxide and Chitosan Combination as A Pulp Capping Material on The Increased Expression of Osteopontin and Runt-Related Transcription Factor 2 in Dentine Reparative Formation in Osteoporosis

Dian Agustin Wahjuningrum, Ravishinta Efty
Arwinda, Veronica Regina Rosselle, Setyabudi,
Tamara Yuanita¹, Anuj Bhardwaj, Novaldy
Wahjudianto, Michelle Callea, Cruz González Alberto
Carlos

Pages 1395-1399

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/2-D23_2834_Dian_Agustin_Wahjuningrum_Indonesia.pdf]

EXPERIMENTAL ARTICLE

3. Fluoride Levels in Different Dental Pastes Marketed in Morocco

Abdelouhahed El Alaoui, Abdellah Moustaghfir,
Chadia Ouazzani, Issam Essebbahi, Abdallah Dami,
Lhoussine Balouch

Pages 1400-1407

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/3-D23_2270_Chadia-Ouazzani_Morocco.pdf]

EXPERIMENTAL ARTICLE

4. The Effect of 96% Ethanol Extract of Bidara Leaf (*Ziziphus Mauritiana*) on the Hemostatic Activity in Sprague-Dawley Rats

Irvan Septrian Syah Putra Rasad, Wiwiek
Poedjiastoeti, Moehamad Orliando Roeslan

Pages 1408-1413

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/4-D23_2838_Wiwiek_Poedjiastoeti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

5. Evaluation of the Effect of Nano-Hydroxyapatite Versus Nano-Hydroxyapatite 3D Scaffold Membrane on Osseointegration's Quality of Dental Implants (Radiographic and Histopathological Experimental Study)

Heba Mohmed Fayed, Sherif Eid, Hala Yassin,
Shereen Fathy, Yasmine Alaa El-din, Yasser
Mohamed Helmy Elkamary, Waheed Abdelhamid
Ahmed

Pages 1414-1424

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/5-D23_2816_Yasmine_Alaa_El_din_Egypt.pdf]

EXPERIMENTAL ARTICLE

6. OPG and RANKL Expression on Orthodontic Tooth Movement after Cacao Bean Extract Administration

Rina Sutjiati, Leliana S. Devi, Herniyati, Rudy
Joelijanto, Vanda Ramadhani, Dwi Prijatmoko,
Shierin V. Fiolita, Syafika N. Fadiyah, Millenieo
Martin

Pages 1425-1430

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/6-D23_2842_Rina_Sutjiati_Indonesia.pdf]

EXPERIMENTAL ARTICLE

7. X-Ray Diffraction of Tetragonal Phase Zirconia Dioxide after Artificial Aging and Loads

Oleg Mordanov, Zurab Khabadze, Roman Meremkulov, Mohammad Sheibanian, Alim Bakov, Ahmed Tagirov, Saeid Saeidyan, Karen Karapetov, Shainyan Ashot, Anar Iskenderov, Viktoriia Golovina

Pages 1431-1435

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/7-D23_2856_Zurab_Khabadze_Russia.pdf]

EXPERIMENTAL ARTICLE

8. The effect of Sarang Semut (*Myrmecodia pendens* and *Myrmecodia tuberosa* jack) as Antibacterial for Periodontal Pocket Therapy

Lilies Anggarwati Astuti, Ika Fikriah, Sinar Yani

Pages 1436-1442

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/8-D23_2850_Lilies_Anggarwati_Astuti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

9. The Effect of Addition Cacao Pod Shell and Green Tea for Pulp Capping Materials on Reducing Malondialdehyde and Apoptosis Expressions

Tamara Yuanita, Dian Agustin Wahjuningrum, Rosa Amalia Iqony, Setyabudi, Felina Lucia Charyadie, Shindyloken Juni Artha Tarigan, Michelle Callea, Niraj Kinariwala

Pages 1443-1448

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/9->

D23_2930_Dian_Agustin_Wahjuningrum_Tamara_Yuanita_I

EXPERIMENTAL ARTICLE

10. Surface Roughness of Polished Translucent Zirconia after Immersion in Different Beverages and Temperatures

Wasan Vatanasak, Taksid Charasseangpaisarn,
Wanchalerm Preedapratayagul, Natchanon
Chantasriviroj, Pitchapa Kongsakorn, Nattida
Likitsuwanakool, Thankit Kittaweevitak

Pages 1449-1453

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/10->

D23_2865_Taksid_Charasseangpaisarn_Thailand-1.pdf]

EXPERIMENTAL ARTICLE

11. The Potential of Rosella Floss (Hibiscus Sabdariffa L.) as a Dental Plaque Disclosing Agent

Vitri Nurilawaty, Tedi Purnama, Ai Emalia Sukmawati,
Silvester Maximus Tulandi

Pages 1454-1461

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/11->

D23_2852_Tedi_Purnama_Indonesia.pdf]

EXPERIMENTAL ARTICLE

12. Comparison of Quality of Obturation, Instrumentation Time and Post Operative Pain in the Primary Mandibular Molar Teeth using Three

Different manual instrumentation system – a Randomized Clinical Trial

Ahsana Asif, Ganesh Jeevanandan, Vishnu Priya
Veeraraghavan, Mohamed El-Sherbiny, Jenan
Moussa Alnamly, Nawaf Salah Ayad, Noorhan
Alsaleebi, Ateya Megahed Ibrahim

Pages 1462-1468

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/12-D23_2886_Ganesh_Jeevanandan_India.pdf]

EXPERIMENTAL ARTICLE

13. Computational Mechanism of Brown Seaweed (*Sargassum duplicatum*) on Non- Alcoholic Fatty Liver Disease (NAFLD)

Herin Setianingsih, Peppy Nawangsasi

Pages 1469-1473

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/13-D23_2862_Herin_Setianingsih_Indonesia.pdf]

EXPERIMENTAL ARTICLE

14. The Effects of Acid Etching Time on Shear Bond Strength of 3Y-TZP and 5Y-TZP Zirconia to Composite Resin

Nopchanok Kaewwichian, Piriya Yavirach, Pisaisit
Chaijareenont, Apichai Yavirach

Pages 1474-1482

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/14-D23_2892_Apichai_Yavirach_Thailand.pdf]

EXPERIMENTAL ARTICLE

15. Effect of Combination of Red Pine and Ca(OH)₂ as Root Canal Sealer on Fibroblast Cell Apoptosis Through Caspase-3 Expression

Tamara Yuanita, Sylvia Paulina Panggono, Devi Eka Juniarti, Setyabudi, Dian Agustin Wahjuningrum, Iin Indah Aris Wati, Adinda Fazzahra Salma, Michele Callea, Niraj Kinariwala

Pages 1483-1488

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/15-D23_2931_Dian_Agustin_Wahjuningrum_Tamara_Yuanita_I

EXPERIMENTAL ARTICLE

16. Investigation of Cytotoxicity of Dental Light-Curing Composite Materials

Zurab Khabadze, Saida Abdulkerimova, Anastasia Lokhonina, Yulia Generalova, Irina Eremina, Mariana Borlakova, Marina Dashtieva, Alena Kulikova, Khalimat Magomedova, Anastasia Mordanova, Timur Melkumyan

Pages 1489-1493

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/16-D23_2965_Zurab_Khabadze_Russia.pdf]

EXPERIMENTAL ARTICLE

17. Effect of Clinacanthus nutans Leaf Extract on the Production of TGF- β 1 and bFGF in Human Dermal Fibroblasts

Rezky Anggraeni, Moehamad Orliando Roeslan, Melanie Sadono Djamil, Boedi Oetomo Roeslan

Pages 1494-1500

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/17-D23_2965_Zurab_Khabadze_Russia.pdf]

content/uploads/2023/12/17-

D23_2872_Moehamad_Orliando_Roeslan_Indonesia.pdf]

EXPERIMENTAL ARTICLE

18. Comparative Evaluation of Physical and Antimicrobial Properties of Doxycycline Incorporated Formulation of Mineral Trioxide Aggregate – An In-Vitro Study

Vignesh Ravindran, Ganesh Jeevanandan, Vishnu Priya Veeraraghavan, Mohamed El-Sherbiny, Jenan Moussa Alnamly, Nawaf Salah Ayad, Noorhan Alsaleebi, Ateya Megahed Ibrahim

Pages 1501-1509

Full Text

PDF

[[http://www.jidmr.com/journal/wp-](http://www.jidmr.com/journal/wp-content/uploads/2023/12/18-D23_2889_Ganesh_Jeevanandan_India.pdf)

content/uploads/2023/12/18-

D23_2889_Ganesh_Jeevanandan_India.pdf]

EXPERIMENTAL ARTICLE

19. Observer Agreement in Temporomandibular Joint Space Measurement using Open-Source Software and Commercial Software

Alhidayati Asymal, Menik Priaminiarti, Heru Suryonegoro, Brama Kiswanjaya, Hanna H Bachtiar-Iskandar

Pages 1510-1515

Full Text

PDF

[[http://www.jidmr.com/journal/wp-](http://www.jidmr.com/journal/wp-content/uploads/2023/12/19-D23_2874_Menik_Priaminiarti_Indonesia.pdf)

content/uploads/2023/12/19-

D23_2874_Menik_Priaminiarti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

20. Effects of Surface Treatments on Shear Bond Strength of Metal Bracket Bonded to Ultra-Translucent Zirconia

Kunpreeya Wiriyaamornchai, Paiboon Techalertrpaisarn, Tanan Jaruprakorn, Preeya Suwanwitid

D 1510-1515

Pages 1516-1522

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/20->

D23_2922_Irin_Sirisoontorn_Preeya_Suwanwitid_Thailand.pdf]

EXPERIMENTAL ARTICLE

21. Increased Expression of Runx2 and Osteocalcin in Freeze Dried Bovine Bone Scaffold-Secretome Mesenchymal Stem Cell (In Vitro Laboratory Experimental Research on MC3T3-E1 Pre-Osteoblast Cell Culture)

Danang Priyo Utomo, David Buntoro Kamadjaja, Ni Putu Mira Sumarta, Coen Pramono, Andra Rizqiawan, Andang Miatmoko, Eryk Hendrianto, Mohammad Zeshan Rahman

Pages 1523-1529

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/21->

D23_2932_Dian_Agustin_Wahjuningrum_David_Buntoro_Kamadjaja.pdf]

EXPERIMENTAL ARTICLE

22. Digital Dental Patient Study Concept: Improved Approach for High Quality Dental Education Within the Conditions of War or Sanitary Restrictions

Myroslav Goncharuk-Khomyn, Svitlana Kostenko, Volodymyr Melnyk, Liubov Bilyshchuk, Anatoliy Foros, Stepan Sheveria, Yuriy Bun, Ivan Bohdan, Oleksandr Bilynskyi

Pages 1530-1538

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/22->

D23_2947_Myroslav_Goncharuk_Khomyn_Ukraine.pdf]

EXPERIMENTAL ARTICLE

23. Patient Satisfaction with Orthodontic Treatment

Krisnawati, Miesje K Purwanegara, Retno Widayati,
Lindawati S Kusdhany

Pages 1539-1545

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/23-D23_2266_Lindawati_S_Kusdhany_Krisnawati_Indonesia.pdf]

EXPERIMENTAL ARTICLE

24. Incidental Findings in Digital Panoramic Radiographs among Dental School's Patients

Hazar S. AlHarbi, Shaikha Aldukhail, Sara M.
Elkhateeb

Pages 1546-1554

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/24-D23_2848_Sara_M_Elkhateeb_KSA.pdf]

EXPERIMENTAL ARTICLE

25. Increased Number of Osteoblasts and New Bone Formation in Rat's Tooth Socket Implanted with Nanocrystalline Hydroxyapatite from Pensi Shells

Andries Pascawinata, Arniati Labanni, Gusti Revilla,
Roni Eka Sahputra, Syukri Arief

Pages 1555-1561

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/25-D23_2911_Syukri_Arief_Indonesia.pdf]

EXPERIMENTAL ARTICLE

26. User Experience and Perceived Benefits of Oral Health Impact Profile Mobile Application

(OHIPMA)

Ili Mazlina Mukhtar, Natalia Mohd Dani Goh,
Nuruljannah Nor Azmi, Mahyunah Masud

Pages 1562-1566

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/26-D23_2866_Mahyunah_Masud_Malaysia.pdf]

EXPERIMENTAL ARTICLE

27. Lip Print Profiling of Tribes in Aceh Indonesia using the Suzuki-Tsuehachi Method

Abdillah Imron Nasution, Raihan Saffitri, Rossa Oktaviani, Yunni Kardisa, Khuntum Khaira Ummah

Pages 1567-1572

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/27-D23_2205_Abdillah_Imron_Nasution_Indonesia.pdf]

EXPERIMENTAL ARTICLE

28. Comparison of Intraoral Sites Reached by Different Mouthwash Administration Methods

Chalatip Chompunud Na Ayudhya, Chanyanuch Teerawong, Ruchadaporn Kaomongkolgit, Weeraya Tantanapornkul, Peerapong Wamasing, Chutamas Deepho, Sirilawan Tohnak

Pages 1573-1577

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/28-D23_2867_Chalatip_Chompunud_Na_Ayudhya_Thailand.pc]

CLINICAL ARTICLE

29. Tootpaste Formulation of Telang Flower (Clitoria Ternatea L.) Ethanol Extract as an Antibacterial for Streptococcus Mutans and

Antirungal for Candida Albicans in the Oral Cavity

Dendy Murdiyanto, Septriyani Kaswindiarti, Diyah Fatmasari, Fauzia Nur Maulida, Naura Hasna Yuanihsan

Pages 1578-1584

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/29-D23_2926_Dendy_Murdiyanto_Indonesia.pdf]

CLINICAL ARTICLE

30. The Effect of Fluoride Acid Etching Times on the Adhesive Behaviours of Porcelain Restorative Materials on the Cohesive Fractures of Porcelain Fused to Metal Restoration

Femy Rilinda, Syafrinani, Saharman Gea, Putri Welda Utami Ritonga

Pages 1585-1594

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/30-D23_2884_Putri_Welda_Utami_Ritonga_Indonesia.pdf]

CLINICAL ARTICLE

31. The Stability and Antibacterial Properties of Citronella and Lemon Oil Mouthwashes on Oral Biofilm

Friska Ani Rahman, Ahmad Syaify, Ronny Martien, Siti Sunarintyas

Pages 1595-1601

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/31-D23_2908_Siti_Sunarintyas_Indonesia.pdf]

CLINICAL ARTICLE

32. Effectiveness of “SIAP” Infection Control**Methods to Reduce Microorganism****Contamination in Dental Practice at Primary Healthcare Center**

Nur Khamilatusy Sholekhah, Chriswardani
Suryawati, Henry Setyawan, Mohammad Zen
Rahfiludin

Pages 1602-1609

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/32-D23_2916_Nur_Khamilatusy_Sholekhah_Indonesia.pdf]

CLINICAL ARTICLE**33. Intradermal Irritation Assessment of Ethyl Acetate Extract of Sarang Semut (*Myrmecordia pendans*) on Rat Skin: An In-Depth In Vivo Study**

Lusi Epsilawati, Azhari, Mieke Hermiawati Satari,
Bambang Pontjo Priosoeryanto, Tri Isyani Tungga
Dewi, Merry Annisa Damayanti, Aga Satria
Nurrachman

Pages 1610-1615

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/33-D23_2910_Lusi_Epsilawati_Indonesia.pdf]

CLINICAL ARTICLE**34. Genetic Variation using the 21 Str Codis Loci for Forensic Identification Examinations among Siblings of Madurese Living in Surabaya**

Ahmad Yudianto, Arofi Kurniawan, Beta Novia Rizky,
M. Kholil Ikhsan, Shella Morina, William Daniel
Napitupulu, Fery Setiawan, Indah Nuraini Masjkur,
Qurrotun A'yunil Huda

Pages 1616-1619

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/34-D23_2917_Ahmad_Yudianto_Indonesia.pdf]

CLINICAL ARTICLE

35. Production and Characterization of Membranes from Collagen of Carp Scales (*Cyprinus carpio*)

Dyah Nindita Carolina, Mieke Hemiawati Satari, Bambang Pontjo Priosoeryanto, Agus Susanto, Cortino Sukotjo, Rahmana Emran Kartasasmita

Pages 1620-1626

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/35-D23_2919_Dyah_Nindita_Carolina_Indonesia.pdf]

CLINICAL ARTICLE

36. Salivary Total Protein Level in Elderly Patients with Periodontitis Related to Type 2 Diabetes Mellitus: A Community Based Study

Sri Utami, Hari Kusnanto, Dibyo Pramono, Nova Oktavia, Novitasari Ratna Astuti, Arya Adiningrat

Pages 1627-1631

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/36-D23_2846_Sri_Utami_Indonesia.pdf]

CLINICAL ARTICLE

37. Physical Health of Males Residents from the Lowland Districts of Ukrainian Transcarpathia During the Post-Pubertal Period Depending on the Component Body Composition

Olena Dulo, Nataliia Hema-Bahyna, Rustam Akhmetov, Myroslav Goncharuk-Khomyn, Yevhen Lokota, Viktoriia Onishchuk, Yurii Lokota

Pages 1632-1637

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/37-D23_2949_Myroslov_Goncharuk_Khomyn_Ukraine.pdf]

CLINICAL ARTICLE

38. Stigma Toward People With HIV/AIDS among Health Science Students in Indonesia

Indriasti Indah Wardhany, Lila Fairuz Febriyanty,
Yuniardini Septorini Wimardhani

Pages 1638-1646

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/38-D23_2828_Yuniardini_Septorini_Wimardhani_Indonesia.pdf]

CLINICAL ARTICLE

39. An Association Between Osteoporosis and the Mandibular Cortical Bone Among Post-Menopausal Women as Revealed by Pixel Intensity Imagery in Panoramic Radiograph

Effect of *Clinacanthus nutans* Leaf Extract on the Production of TGF- β 1 and bFGF in Human Dermal Fibroblasts

Rezky Anggraeni¹, Moehamad Orliando Roeslan^{1*},
Melanie Sadono Djamil¹, Boedi Oetomo Roeslan¹

1. Department of Oral Biology Faculty of Dentistry, Universitas Trisakti – Indonesia.

Abstract

A chloroform extract of the leaves of *Clinacanthus nutans*, a medicinal plant, contains purpurin-18 phytol ester that has the ability to induce fibroblast migration. However, no scientific investigation has been conducted on its effect on the production of proteins related to wound healing.

The aim of this study was to investigate the effect of a *C. nutans* extract on the production of two important growth factors, TGF- β 1 and bFGF, by dermal fibroblasts. Methods: A chloroform extract of *C. nutans* was fractionated using a vacuum column chromatography method. Fractions containing a spot with an R_f value of 0.58 (the retention time of authentic purpurin-18 phytol ester) on TLC plates were used in biological assays. Dermal fibroblasts were exposed to various concentrations of the chloroform extract and fractions from *C. nutans* for 12 or 24 h, and TGF- β 1 and bFGF expression at the protein level was measured by enzyme-linked immunosorbent assay (ELISA).

At 12 and 24 h, the TGF- β 1 and bFGF protein levels were significantly increased by exposure to the chloroform extract and fractions 5B and 5C compared to the negative control.

Chloroform extracts and fractions of *C. nutans* that contained purpurin 18-phytol ester increased the protein synthesis of TGF- β 1 and bFGF by dermal fibroblasts.

Experimental article (J Int Dent Med Res 2023; 16(4): 1494-1500)

Keywords: Clinacanthus nutans, TGF- β 1, bFGF, fibroblast.

Received date: 01 September 2023

Accept date: 05 October 2023

Introduction

Wound healing is a normal, but very complicated, biological process that involves several phases that overlap with manufacturing and cellular processes of haemostasis, inflammation, proliferation and remodelling.^{1,2} Several studies indicate that growth factors play an important role in the cell division, migration, differentiation, enzyme production, and protein expression responsible for wound healing through the stimulation of angiogenesis and cellular proliferation.^{3,4} Two key growth factors associated with wound healing are TGF- β 1 and bFGF.

TGF- β 1 has been shown to activate angiogenesis by stimulating smooth muscle vascular migration.⁵ This basic fibroblast growth

factor has the ability to regulate the replication and migration of epithelial, endothelial, and fibroblast cells, which participate in collagen production, epithelialisation, and neovascularisation, respectively.⁶ During wound healing, tissue remodelling allows the replacement of injured tissue, and fibroblasts play an active role in this phase by replenishing damaged tissue through cell proliferation, differentiation and migration. Among these processes, fibroblast migration is a critical biological response during wound healing, as these are the cells responsible for the synthesis of collagen fibres in the connective tissue.^{7,8}

Wound healing remains a critical issue, and this has stimulated the search for natural medicines that can promote this process. One of the medicinal plants currently being developed is *Clinacanthus nutans*, a member of the Acanthaceae family. The leaves of this plant have been used as a traditional medicine in Thailand, Indonesia, and Malaysia to treat cancer, herpes, diabetic dysentery, skin rashes, and snake bites. *In vitro* studies have shown that

Trisakti, Jakarta, Indonesia.
E-mail: orliando.roeslan@trisakti.ac.id

ethanolic extracts of *C. nutans* have anti-inflammatory and anticancer activity.^{9,10,11} Previous phytochemical studies have identified flavonoids, steroids, triterpenoids, cerebrosides, glycosylglycerolipids, glycerides, sulfur-containing glycosides in these extracts. Among these natural products, glycosylglycerolipids and digalactosyl diglycerides exhibit antiviral and anti-HSV activity, respectively.¹² Previous research has revealed that chloroform extracts from *C. nutans* leaves contain purpurin-18 phytol ester, which shows anti-inflammatory, anti-biofilm, and wound-healing activity. Both the crude chloroform extracts and the isolated purpurin-18 phytol ester could be potential therapeutic agents for treating gingivitis and inflammations of the mouth (Roeslan *et al.* 2019). The aim of the present study was to investigate the effect of a *C. nutans* leaf chloroform extract and its fractions on the production of two important growth factors, TGF- β 1 and bFGF, by dermal fibroblasts.

Materials and methods

Plant material preparation, extraction and fractionation

Fresh leaves of *C. nutans* were collected in Indonesia, and the specimens were authenticated by the Indonesian Institute of Science. The *C. nutans* leaf powder (182 g) was sequentially extracted in a Soxhlet extractor at 55°C, first with hexane and then with chloroform (Merck, USA), using a method described previously with some modification.¹³ The solvent was then evaporated in a rotary evaporator (Buchi, Switzerland) at 30°C to generate hexane (7.53 g) and chloroform (4.01 g) extracts. The chloroform extract was fractionated using the column vacuum chromatograph method. The extract was loaded onto a column packed with silica gel 60 and eluted with a hexane-ethyl acetate gradient (9:1 to 1:9 v/v). This method generated multiple fractions; these were later combined based on their similar components, as determined by TLC analysis, resulting in 6 fractions (F1–F6). The fractions were combined based on their content of a compound with a retention factor (R_f) value of 0.58, the known retention time of the purpurin-18 phytol ester.¹³ F5 was selected for further fractionation and generated 5 new fractions (F5A, F5B, F5C, F5D and F5E). Of these fractions, F5A, F5B and F5C TLC showed a high intensity of the R_f = 0.58 spot,

so these three fractions were chosen for further protein assays. The scheme of the extraction is shown in Figure 1.

Figure 1. Scheme of the extraction and fractionation of *Clinacanthus nutans* leaves. The leaf powder was sequentially extracted with hexane and chloroform in a Soxhlet extractor. The chloroform extract was fractionated by column vacuum chromatography using a hexane-ethyl acetate gradient (9:1 to 1:9) as the eluting solvent. Each eluted fraction was analysed by TLC using hexane:ethyl acetate (7:3) solvent as the mobile phase. After combination of fractions with similar profiles, 6 fractions were obtained. Based on the TLC profile, fraction 5 contained a spot with an R_f value of 0.58, so this fraction was further fractionated. The second fractionation yielded 5 fractions (F5A-F5E). Based on the TLC profile, F5A, F5B and F5C contained spots with an R_f value of 0.58. These three fractions were then used in the ELISA assay.

Analytical TLC

Thin-layer chromatography was performed on crude extracts and extract fractions using pre-coated silica gel 60F-254 with 0.2 mm layer thickness (ALUGRAM Xtra SIL G/UV254;

Macherey-Nagel, Germany). Capillary tubes were used to apply two microliters of the solutions onto the plates, developed with a mobile phase of hexane:ethyl acetate (7:3, v/v) solvent, dried, and visualised under UV 366 nm.

Figure 2. Chromatographic profiles of fractions from *Clinacanthus nutans* chloroform extracts detected by exposure to UV366. These three fractions contain purpurin-18 phytol ester with an Rf value of 0.58 (white arrow), and were tested on fibroblasts.

Cell culture

Human dermal fibroblasts were a gift from Dr. Indra Kusuma from Faculty of Medicine, YARSI University, Jakarta, Indonesia. The cells were cultured in Dulbecco's Modified Eagle Medium (DMEM) (Gibco, USA), supplemented with 10% foetal bovine serum (Gibco, USA) and 250 IU/mL penicillin (Invitrogen, USA), under standard culture conditions at 37°C in a 5% CO₂ humidified incubator. The medium was changed regularly, and the cells were sub-cultured every 3–4 days or after reaching 80% confluence in the culture flasks.

Figure 3. TGF- β 1 expressions in fibroblast exposed to crude extracts and fractions from *Clinacanthus nutans*. TGF- β 1 production was determined by ELISA of fibroblast culture supernatants after a 12 h (A), and 24 h (B) incubation with various concentrations of the extracts or fractions. *Aloe vera* (AV) was used as a positive control. * indicates a statistically significant difference compared to the negative control ($p < 0.05$).

Analysis of TGF- β 1 and bFGF protein expression by ELISA

Dermal fibroblast cells were grown in 96-well plates (10^5 cell/well) and exposed to *C. nutans* solutions at 10, 50 and 100 mg/mL. The culture supernatant was then collected at 12 and 24 h and frozen at -20°C. The TGF- β 1 and bFGF levels from the cell culture supernatants were measured with ELISA kits (Raybiotech, Norcross, USA) according to the manufacturer's instructions. In brief, 100 μ L of standard and sample were added to each cell culture supernatant in appropriate wells. The wells were covered and incubated at room temperature for 2.5 h. The solution was discarded, and the cells were washed 4 times with 200 μ L of wash solution (1 $\times$) per well. Then, 100 μ L of 1 $\times$ prepared biotinylated antibody were added to

each well. The plate was incubated at room temperature for 1 h, then the solution was discarded and the cells were washed 4 times with $1 \times 200 \mu\text{L}$ of wash solution per well. After washing, $100 \mu\text{L}$ of prepared streptavidin solution was added to each well and incubated for 45 min at room temperature. The solution was discarded, and the cells were washed five times with $1 \times 200 \mu\text{L}$ of wash solution per well. Then, $100 \mu\text{L}$ of TMB One-Step Substrate Reagent was added to each well and incubated at room temperature for 30 min in the dark. After addition of $50 \mu\text{L}$ of stop solution, the absorbance was read immediately at 450 nm. The results were expressed as TGF- β 1 and bFGF levels in pg per mL of cell culture supernatant.

Statistical analysis

The data were reported as the means $\pm$ standard deviation of the mean. Significant differences were determined using two-way analysis of variance (ANOVA) followed by Tukey's post hoc test. All statistical analyses were performed using GraphPad Prism 5.0 software (GraphPad Software Inc., USA). Differences were considered significant at $P < 0.05$.

Results

TLC analysis

Thin-layer chromatography was performed to identify fractions containing the compound with an R_f value of 0.58 (purpurin-18 phytol ester). The TLC profiles of the fractions used for bioassay are shown in Figure 2.

TGF- β 1 and bFGF protein analysis

TGF- β 1 and bFGF secretions were evaluated by incubating dermal fibroblasts in the presence of various concentrations of the crude extracts and fractions of *C. nutans* leaves. The culture supernatants were collected at 12 and 24 h for quantification of protein levels. At 12 h, cells treated with fraction 5B (concentration $100 \mu\text{g/mL}$) and the crude extract (concentration $50 \mu\text{g/mL}$) showed a significantly higher release of TGF- β 1 protein compared to the negative control. At 24 h, cells treated with fraction 5C (all concentrations), the crude extract (concentrations of $10 \mu\text{g/mL}$ and $100 \mu\text{g/mL}$) showed statistically significant increased release of TGF- β 1 protein compared to the negative control (Figure 3). The release of bFGF protein at 12 h was significantly greater from cells treated

with fraction 5B (concentration $50 \mu\text{g/mL}$) and fraction 5C (concentration 50 and $100 \mu\text{g/mL}$) compared to the negative control. At 24 h, treatment with *aloe vera* (concentration $100 \mu\text{g/mL}$), fraction 5B (concentration 10 and $50 \mu\text{g/mL}$), fraction 5C (concentration 50 and $100 \mu\text{g/mL}$), and the *C. nutans* crude extract (all concentrations) significantly increased the release of bFGF protein from the treated fibroblasts compared to the negative control (Figure 4).

Figure 4. bFGF expression in fibroblasts exposed to crude extracts and fractions of *Clinacanthus nutans*. The bFGF production was determined by ELISA of fibroblast culture supernatants after a 12 h (A), and 24 h (B) incubation with various concentrations with various concentrations of the extracts or fractions. *Aloe vera* (AV) was used as a positive control. * indicates a statistically significant difference compared to the negative control ($p < 0.05$).

Discussion

In this study, powdered leaf material from *C. nutans* was extracted using a Soxhlet extraction method. The main advantage of

Soxhlet extraction is that it requires only a clean warm solvent for extraction of the solids placed in the thimble and is a continuous, easy-to-use and inexpensive process. This continuous process can increase the extraction efficiency compared to simply heating the solid in a flask containing the solvent. Conversely, the disadvantages of the Soxhlet extraction method are that heat-resistant compounds may be lost during the process, the extraction takes a long time and it requires a large volume of solvent.^{14,15}

The solvents used in this study for extraction were hexane and chloroform. Hexane is a nonpolar solvent, so hexane can dissolve nonpolar compounds, whereas chloroform is a semi-polar solvent so it can dissolve semi-polar compounds. The advantage of sequential extraction with hexane and then chloroform is that the nonpolar compounds have already been extracted by hexane, so they do not interfere with extraction of the semi-polar compounds by chloroform. In previous research, all crude extracts showed activity in a wound healing scratch test, but the chloroform extract showed the strongest activity. This is the reason why the chloroform extract was chosen for further isolation. The difference in solvents in the extraction can affect the final extracted content of the desired compound due to differences in polarity of the solvents.^{16,17}

The resulting extract can be further purified by the fractionation process; in this case, the fractionation method was vacuum liquid column chromatography. The column is filled with a solid adsorbent as the fixed phase and a solvent is used as the mobile phase. The sample to be fractionated is run into the column and then eluted with the mobile phase. The separation of the components depends on the degree of polarity of the mobile phase and the compounds contained in the mixture. In this case, silica gel was used as the absorbent or fixed phase, and various solvent ratios of hexane and ethyl acetate (9:1 to 1:9) were applied as the mobile phase, using a vacuum pump to facilitate and speed up the elution.

The active constituents of *C. nutans* have been studied extensively. Chlorophyll compounds are the only elements of *C. nutans* that have been reported to have beneficial activities, such as antiviral, anti-inflammatory and anti-biofilm activities.^{13,18} One previous study showed that purpurin-18 phytol ester is the

compound responsible for wound healing activity and that it had an Rf value on TLC of 0.58.¹³ In line with the previous research, the purpurin-18 phytol ester in our TLC analysis was found in the *C. nutans* chloroform extract fractions 5A, 5B and 5C, and showed the appropriate Rf value, colour characteristics and TLC profile. These fractions were therefore deemed appropriate for use in the fibroblast experiments.

The proliferation, differentiation, and migration of fibroblasts are key roles in wound healing.¹⁹ Fibroblasts proliferate and migrate to the wound area, synthesise extracellular matrix, and express thick actin spindles during their transition into myofibroblasts.²⁰ TGF- β 1 and bFGF are important cytokines produced by fibroblasts and are responsible for cell division, cell differentiation, protein expression and enzyme production. Fibroblasts have the ability to promote wound healing through the stimulation of angiogenic factors and by cellular proliferation that influences the production and degradation of extracellular matrix through chemotactic roles.²¹

Previous study showed that Aloe vera enhanced oral mucosa wound healing in vivo by increasing TGF- β 1.²² Another previous study showed that Aloe vera A previous study comparing the expression of TGF- β 1 and bFGF in mouse embryo fibroblasts treated for 12 or 24 h with various concentrations of Aloe vera (AV) gel at concentrations of 50, 100 and 150 g/mL showed increased expression of TGF- β 1 and bFGF at 12 h but decreased expression at 24 h.²³ These results differ from those of the present study, where the expression of bFGF following treatment of fibroblasts with *C. nutans* extract or fractions for 24 h was significantly higher than after a 12 h treatment. By contrast, the TGF- β 1 expression by fibroblasts showed only a slight and not statistically significant increase after a 24 h exposure to *C. nutans* extract or fractions.

The expression of TGF- β 1 increased significantly following 12 h exposure to fraction B at a concentration of 100 g/mL or the crude extract at all concentrations. The expression of TGF- β 1 was significantly increased after 24 h exposure to fraction A (10 g/mL), fraction C (10, 50 and 100 g/mL) and the crude extract of *C. nutans* (10 and 100 g/mL). The results for TGF- β 1 after 12 and 24 h exposure to the crude extract of *C. nutans* alone showed a significant increase and probably reflects a response to

compounds other than purpurin-18 phytol ester that are present in the crude extract of *C. nutans* and can also increase the expression of TGF- β 1 and bFGF. Another possibility is that a synergistic effect occurs between the compounds in the crude extract of *C. nutans* and activates this extract. Notably, the present results indicate that these compounds from *C. nutans* leaves are more active than the compounds contained in *Aloe vera* extracts. Fraction A, from the TLC analysis, showed a thick, dense material with the Rf value of 0.58, indicating the possibility of the presence of compounds other than purpurin-18 phytol ester in fraction A. This could explain why both fraction A and the crude extract of *C. nutans* showed increases in protein expression at 12 and 24 h.

The expression of bFGF at 12 h was increased by exposure of the fibroblasts to fraction B at a concentration 50 μ g/mL and fraction C at concentrations of 50 and 100 μ g/mL. However, the bFGF expression at 24 h increased in response to the *Aloe vera* positive control (100 g/mL), fraction B (50 and 100 μ g/mL), fraction C (50 and 100 g/mL) and the crude extract of *C. nutans* (10, 50 and 100 μ g/mL). Fractions B and C had higher activity than fraction A and probably reflects the thicker density of fractions B and C on the TLC plates at an Rf value of 0.58, indicating a higher concentration of purpurin-18 phytol ester than in fraction A. Fractions A, B and C are sub-fractions that have been fractionated with hexane (nonpolar) and ethyl acetate (semi-polar) eluents in various ratios, so the compounds contained in them are purer than in the crude extracts.

Conclusions

Our study revealed that chloroform extracts and fractions of *C. nutans* that contained purpurin-18 phytol ester could increase the protein production of TGF- β 1 and bFGF in dermal fibroblasts. *Clinacanthus nutans* may therefore be a potential medicinal plant for accelerating wound healing. However, further study is still required to confirm this speculation.
