DENTISTRY**EXPERIMENTAL ARTICLE**

1. Repair Shear Bond Strength of Aged
Provisional 3D-Printed Resin: Role of Repair
Materials

nutnawat laoknampu, Hatnairat Lekatana,
Jadesada Palasuk

Pages 1389-1394

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/1-D23_2860_Jadesada_Palasuk_Thailand.pdf]

EXPERIMENTAL ARTICLE

2. The Effect of Calcium Hydroxide and Chitosan Combination as A Pulp Capping Material on The Increased Expression of Osteopontin and Runt-Related Transcription Factor 2 in Dentine Reparative Formation in Osteoporosis

Dian Agustin Wahjuningrum, Ravishinta Efty
Arwinda, Veronica Regina Rosselle, Setyabudi,
Tamara Yuanita¹, Anuj Bhardwaj, Novaldy
Wahjudianto, Michelle Callea, Cruz González Alberto
Carlos

Pages 1395-1399

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/2-D23_2834_Dian_Agustin_Wahjuningrum_Indonesia.pdf]

EXPERIMENTAL ARTICLE

3. Fluoride Levels in Different Dental Pastes Marketed in Morocco

Abdelouhahed El Alaoui, Abdellah Moustaghfir,
Chadia Ouazzani, Issam Essebbahi, Abdallah Dami,
Lhoussine Balouch

Pages 1400-1407

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/3-D23_2270_Chadia-Ouazzani_Morocco.pdf]

EXPERIMENTAL ARTICLE

4. The Effect of 96% Ethanol Extract of Bidara Leaf (*Ziziphus Mauritiana*) on the Hemostatic Activity in Sprague-Dawley Rats

Irvan Septrian Syah Putra Rasad, Wiwiek
Poedjiastoeti, Moehamad Orliando Roeslan

Pages 1408-1413

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/4-D23_2838_Wiwiek_Poedjiastoeti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

5. Evaluation of the Effect of Nano-Hydroxyapatite Versus Nano-Hydroxyapatite 3D Scaffold Membrane on Osseointegration's Quality of Dental Implants (Radiographic and Histopathological Experimental Study)

Heba Mohmed Fayed, Sherif Eid, Hala Yassin,
Shereen Fathy, Yasmine Alaa El-din, Yasser
Mohamed Helmy Elkamary, Waheed Abdelhamid
Ahmed

Pages 1414-1424

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/5-D23_2816_Yasmine_Alaa_El_din_Egypt.pdf]

EXPERIMENTAL ARTICLE

6. OPG and RANKL Expression on Orthodontic Tooth Movement after Cacao Bean Extract Administration

Rina Sutjiati, Leliana S. Devi, Herniyati, Rudy
Joelijanto, Vanda Ramadhani, Dwi Prijatmoko,
Shierin V. Fiolita, Syafika N. Fadiyah, Millenieo
Martin

Pages 1425-1430

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/6-D23_2842_Rina_Sutjiati_Indonesia.pdf]

EXPERIMENTAL ARTICLE

7. X-Ray Diffraction of Tetragonal Phase Zirconia Dioxide after Arteficial Aging and Loads

Oleg Mordanov, Zurab Khabadze, Roman Meremkulov, Mohammad Sheibanian, Alim Bakov, Ahmed Tagirov, Saeid Saeidyan, Karen Karapetov, Shainyan Ashot, Anar Iskenderov, Viktoriia Golovina

Pages 1431-1435

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/7-D23_2856_Zurab_Khabadze_Russia.pdf]

EXPERIMENTAL ARTICLE

8. The effect of Sarang Semut (*Myrmecodia pendens* and *Myrmecodia tuberosa* jack) as Antibacterial for Periodontal Pocket Therapy

Lilies Anggarwati Astuti, Ika Fikriah, Sinar Yani

Pages 1436-1442

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/8-D23_2850_Lilies_Anggarwati_Astuti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

9. The Effect of Addition Cacao Pod Shell and Green Tea for Pulp Capping Materials on Reducing Malondialdehyde and Apoptosis Expressions

Tamara Yuanita, Dian Agustin Wahjuningrum, Rosa Amalia Iqony, Setyabudi, Felina Lucia Charyadie, Shindyloken Juni Artha Tarigan, Michelle Callea, Niraj Kinariwala

Pages 1443-1448

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/9->

D23_2930_Dian_Agustin_Wahjuningrum_Tamara_Yuanita_I

EXPERIMENTAL ARTICLE

10. Surface Roughness of Polished Translucent Zirconia after Immersion in Different Beverages and Temperatures

Wasan Vatanasak, Taksid Charasseangpaisarn,
Wanchalerm Preedapratayagul, Natchanon
Chantasriviroj, Pitchapa Kongsakorn, Nattida
Likitsuwanakool, Thankit Kittaweevitak

Pages 1449-1453

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/10->

D23_2865_Taksid_Charasseangpaisarn_Thailand-1.pdf]

EXPERIMENTAL ARTICLE

11. The Potential of Rosella Floss (Hibiscus Sabdariffa L.) as a Dental Plaque Disclosing Agent

Vitri Nurilawaty, Tedi Purnama, Ai Emalia Sukmawati,
Silvester Maximus Tulandi

Pages 1454-1461

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/11->

D23_2852_Tedi_Purnama_Indonesia.pdf]

EXPERIMENTAL ARTICLE

12. Comparison of Quality of Obturation, Instrumentation Time and Post Operative Pain in the Primary Mandibular Molar Teeth using Three

Different manual instrumentation system – a Randomized Clinical Trial

Ahsana Asif, Ganesh Jeevanandan, Vishnu Priya
Veeraraghavan, Mohamed El-Sherbiny, Jenan
Moussa Alnamly, Nawaf Salah Ayad, Noorhan
Alsaleebi, Ateya Megahed Ibrahim

Pages 1462-1468

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/12-D23_2886_Ganesh_Jeevanandan_India.pdf]

EXPERIMENTAL ARTICLE

13. Computational Mechanism of Brown Seaweed (*Sargassum duplicatum*) on Non- Alcoholic Fatty Liver Disease (NAFLD)

Herin Setianingsih, Peppy Nawangsasi

Pages 1469-1473

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/13-D23_2862_Herin_Setianingsih_Indonesia.pdf]

EXPERIMENTAL ARTICLE

14. The Effects of Acid Etching Time on Shear Bond Strength of 3Y-TZP and 5Y-TZP Zirconia to Composite Resin

Nopchanok Kaewwichian, Piriya Yavirach, Pisaisit
Chaijareenont, Apichai Yavirach

Pages 1474-1482

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/14-D23_2892_Apichai_Yavirach_Thailand.pdf]

EXPERIMENTAL ARTICLE

15. Effect of Combination of Red Pine and Ca(OH)₂ as Root Canal Sealer on Fibroblast Cell Apoptosis Through Caspase-3 Expression

Tamara Yuanita, Sylvia Paulina Panggono, Devi Eka Juniarti, Setyabudi, Dian Agustin Wahjuningrum, Iin Indah Aris Wati, Adinda Fazzahra Salma, Michele Callea, Niraj Kinariwala

Pages 1483-1488

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/15-D23_2931_Dian_Agustin_Wahjuningrum_Tamara_Yuanita_I

EXPERIMENTAL ARTICLE

16. Investigation of Cytotoxicity of Dental Light-Curing Composite Materials

Zurab Khabadze, Saida Abdulkerimova, Anastasia Lokhonina, Yulia Generalova, Irina Eremina, Mariana Borlakova, Marina Dashtieva, Alena Kulikova, Khalimat Magomedova, Anastasia Mordanova, Timur Melkumyan

Pages 1489-1493

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/16-D23_2965_Zurab_Khabadze_Russia.pdf]

EXPERIMENTAL ARTICLE

17. Effect of Clinacanthus nutans Leaf Extract on the Production of TGF- β 1 and bFGF in Human Dermal Fibroblasts

Rezky Anggraeni, Moehamad Orliando Roeslan, Melanie Sadono Djamil, Boedi Oetomo Roeslan

Pages 1494-1500

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/17-D23_2965_Zurab_Khabadze_Russia.pdf]

content/uploads/2023/12/17-

D23_2872_Moehamad_Orliando_Roeslan_Indonesia.pdf]

EXPERIMENTAL ARTICLE

18. Comparative Evaluation of Physical and Antimicrobial Properties of Doxycycline Incorporated Formulation of Mineral Trioxide Aggregate – An In-Vitro Study

Vignesh Ravindran, Ganesh Jeevanandan, Vishnu Priya Veeraraghavan, Mohamed El-Sherbiny, Jenan Moussa Alnamly, Nawaf Salah Ayad, Noorhan Alsaleebi, Ateya Megahed Ibrahim

Pages 1501-1509

Full Text

PDF

[[http://www.jidmr.com/journal/wp-](http://www.jidmr.com/journal/wp-content/uploads/2023/12/18-D23_2889_Ganesh_Jeevanandan_India.pdf)

content/uploads/2023/12/18-

D23_2889_Ganesh_Jeevanandan_India.pdf]

EXPERIMENTAL ARTICLE

19. Observer Agreement in Temporomandibular Joint Space Measurement using Open-Source Software and Commercial Software

Alhidayati Asymal, Menik Priaminiarti, Heru Suryonegoro, Brama Kiswanjaya, Hanna H Bachtiar-Iskandar

Pages 1510-1515

Full Text

PDF

[[http://www.jidmr.com/journal/wp-](http://www.jidmr.com/journal/wp-content/uploads/2023/12/19-D23_2874_Menik_Priaminiarti_Indonesia.pdf)

content/uploads/2023/12/19-

D23_2874_Menik_Priaminiarti_Indonesia.pdf]

EXPERIMENTAL ARTICLE

20. Effects of Surface Treatments on Shear Bond Strength of Metal Bracket Bonded to Ultra-Translucent Zirconia

Kunpreeya Wiriyaamornchai, Paiboon Techalertpaisarn, Tanan Jaruprakorn, Preeya Suwanwitid

D23_2874_Menik_Priaminiarti_Indonesia.pdf]

Pages 1516-1522

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/20->

D23_2922_Irin_Sirisoontorn_Preeya_Suwanwitid_Thailand.pdf]

EXPERIMENTAL ARTICLE

21. Increased Expression of Runx2 and Osteocalcin in Freeze Dried Bovine Bone Scaffold-Secretome Mesenchymal Stem Cell (In Vitro Laboratory Experimental Research on MC3T3-E1 Pre-Osteoblast Cell Culture)

Danang Priyo Utomo, David Buntoro Kamadjaja, Ni Putu Mira Sumarta, Coen Pramono, Andra Rizqiawan, Andang Miatmoko, Eryk Hendrianto, Mohammad Zeshaan Rahman

Pages 1523-1529

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/21->

D23_2932_Dian_Agustin_Wahjuningrum_David_Buntoro_Kamadjaja.pdf]

EXPERIMENTAL ARTICLE

22. Digital Dental Patient Study Concept: Improved Approach for High Quality Dental Education Within the Conditions of War or Sanitary Restrictions

Myroslav Goncharuk-Khomyn, Svitlana Kostenko, Volodymyr Melnyk, Liubov Bilyshchuk, Anatoliy Foros, Stepan Sheveria, Yuriy Bun, Ivan Bohdan, Oleksandr Bilynskyi

Pages 1530-1538

Full Text **PDF**

[<http://www.jidmr.com/journal/wp-content/uploads/2023/12/22->

D23_2947_Myroslav_Goncharuk_Khomyn_Ukraine.pdf]

EXPERIMENTAL ARTICLE

23. Patient Satisfaction with Orthodontic Treatment

Krisnawati, Miesje K Purwanegara, Retno Widayati,
Lindawati S Kusdhany

Pages 1539-1545

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/23-D23_2266_Lindawati_S_Kusdhany_Krisnawati_Indonesia.pdf]

EXPERIMENTAL ARTICLE

24. Incidental Findings in Digital Panoramic Radiographs among Dental School's Patients

Hazar S. AlHarbi, Shaikha Aldukhail, Sara M.
Elkhateeb

Pages 1546-1554

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/24-D23_2848_Sara_M_Elkhateeb_KSA.pdf]

EXPERIMENTAL ARTICLE

25. Increased Number of Osteoblasts and New Bone Formation in Rat's Tooth Socket Implanted with Nanocrystalline Hydroxyapatite from Pensi Shells

Andries Pascawinata, Arniati Labanni, Gusti Revilla,
Roni Eka Sahputra, Syukri Arief

Pages 1555-1561

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/25-D23_2911_Syukri_Arief_Indonesia.pdf]

EXPERIMENTAL ARTICLE

26. User Experience and Perceived Benefits of Oral Health Impact Profile Mobile Application

(UHIPMA)

Ili Mazlina Mukhtar, Natalia Mohd Dani Goh,
Nuruljannah Nor Azmi, Mahyunah Masud

Pages 1562-1566

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/26-D23_2866_Mahyunah_Masud_Malaysia.pdf]

EXPERIMENTAL ARTICLE

27. Lip Print Profiling of Tribes in Aceh Indonesia using the Suzuki-Tsuehachi Method

Abdillah Imron Nasution, Raihan Saffitri, Rossa Oktaviani, Yunni Kardisa, Khuntum Khaira Ummah

Pages 1567-1572

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/27-D23_2205_Abdillah_Imron_Nasution_Indonesia.pdf]

EXPERIMENTAL ARTICLE

28. Comparison of Intraoral Sites Reached by Different Mouthwash Administration Methods

Chalatip Chompunud Na Ayudhya, Chanyanuch Teerawong, Ruchadaporn Kaomongkolgit, Weeraya Tantanapornkul, Peerapong Wamasing, Chutamas Deepho, Sirilawan Tohnak

Pages 1573-1577

Full Text**PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/28-D23_2867_Chalatip_Chompunud_Na_Ayudhya_Thailand.pc]

CLINICAL ARTICLE

29. Tootpaste Formulation of Telang Flower (Clitoria Ternatea L.) Ethanol Extract as an Antibacterial for Streptococcus Mutans and

Antirungal for Candida Albicans in the Oral Cavity

Dendy Murdiyanto, Septriyani Kaswindiarti, Diyah Fatmasari, Fauzia Nur Maulida, Naura Hasna Yuanihsan

Pages 1578-1584

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/29-D23_2926_Dendy_Murdiyanto_Indonesia.pdf]

CLINICAL ARTICLE

30. The Effect of Fluoride Acid Etching Times on the Adhesive Behaviours of Porcelain Restorative Materials on the Cohesive Fractures of Porcelain Fused to Metal Restoration

Femy Rilinda, Syafrinani, Saharman Gea, Putri Welda Utami Ritonga

Pages 1585-1594

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/30-D23_2884_Putri_Welda_Utami_Ritonga_Indonesia.pdf]

CLINICAL ARTICLE

31. The Stability and Antibacterial Properties of Citronella and Lemon Oil Mouthwashes on Oral Biofilm

Friska Ani Rahman, Ahmad Syaify, Ronny Martien, Siti Sunarintyas

Pages 1595-1601

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/31-D23_2908_Siti_Sunarintyas_Indonesia.pdf]

CLINICAL ARTICLE

32. Effectiveness of “SIAP” Infection Control**Methods to Reduce Microorganism****Contamination in Dental Practice at Primary Healthcare Center**

Nur Khamilatusy Sholekhah, Chriswardani
Suryawati, Henry Setyawan, Mohammad Zen
Rahfiludin

Pages 1602-1609

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/32-D23_2916_Nur_Khamilatusy_Sholekhah_Indonesia.pdf]

CLINICAL ARTICLE**33. Intradermal Irritation Assessment of Ethyl Acetate Extract of Sarang Semut (*Myrmecordia pendans*) on Rat Skin: An In-Depth In Vivo Study**

Lusi Epsilawati, Azhari, Mieke Hermiawati Satari,
Bambang Pontjo Priosoeryanto, Tri Isyani Tungga
Dewi, Merry Annisa Damayanti, Aga Satria
Nurrachman

Pages 1610-1615

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/33-D23_2910_Lusi_Epsilawati_Indonesia.pdf]

CLINICAL ARTICLE**34. Genetic Variation using the 21 Str Codis Loci for Forensic Identification Examinations among Siblings of Madurese Living in Surabaya**

Ahmad Yudianto, Arofi Kurniawan, Beta Novia Rizky,
M. Kholil Ikhsan, Shella Morina, William Daniel
Napitupulu, Fery Setiawan, Indah Nuraini Masjkur,
Qurrotun A'yunil Huda

Pages 1616-1619

Full Text

PDF

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/34-D23_2917_Ahmad_Yudianto_Indonesia.pdf]

CLINICAL ARTICLE

35. Production and Characterization of Membranes from Collagen of Carp Scales (*Cyprinus carpio*)

Dyah Nindita Carolina, Mieke Hemiawati Satari, Bambang Pontjo Priosoeryanto, Agus Susanto, Cortino Sukotjo, Rahmana Emran Kartasasmita

Pages 1620-1626

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/35-D23_2919_Dyah_Nindita_Carolina_Indonesia.pdf]

CLINICAL ARTICLE

36. Salivary Total Protein Level in Elderly Patients with Periodontitis Related to Type 2 Diabetes Mellitus: A Community Based Study

Sri Utami, Hari Kusnanto, Dibyo Pramono, Nova Oktavia, Novitasari Ratna Astuti, Arya Adiningrat

Pages 1627-1631

Full Text 

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/36-D23_2846_Sri_Utami_Indonesia.pdf]

CLINICAL ARTICLE

37. Physical Health of Males Residents from the Lowland Districts of Ukrainian Transcarpathia During the Post-Pubertal Period Depending on the Component Body Composition

Olena Dulo, Nataliia Hema-Bahyna, Rustam Akhmetov, Myroslav Goncharuk-Khomyn, Yevhen Lokota, Viktoriia Onishchuk, Yurii Lokota

Pages 1632-1637

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/37-D23_2949_Myroslov_Goncharuk_Khomyn_Ukraine.pdf]

CLINICAL ARTICLE

38. Stigma Toward People With HIV/AIDS among Health Science Students in Indonesia

Indriasti Indah Wardhany, Lila Fairuz Febriyanty,
Yuniardini Septorini Wimardhani

Pages 1638-1646

Full Text **PDF**

[http://www.jidmr.com/journal/wp-content/uploads/2023/12/38-D23_2828_Yuniardini_Septorini_Wimardhani_Indonesia.pdf]

CLINICAL ARTICLE

39. An Association Between Osteoporosis and the Mandibular Cortical Bone Among Post-Menopausal Women as Revealed by Pixel Intensity Imagery in Panoramic Radiograph

The Effect of 96% Ethanol Extract of Bidara Leaf (*Ziziphus Mauritiana*) on the Hemostatic Activity in Sprague-Dawley Rats

Irvan Septrian Syah Putra Rasad¹, Wiwiek Poedjiastoeti^{1*}, Moehamad Orliando Roeslan²

1. Oral and Maxillofacial Surgery Department, Faculty of Dentistry, Universitas Trisakti, Jakarta, Indonesia.

2. Oral Biology Department, Faculty of Dentistry, Universitas Trisakti, Jakarta, Indonesia.

Abstract

Objective to investigate the efficacy of the 96% ethanol extract of *Ziziphus mauritiana* leaves on hemostasis activity in animal model study (Sprague-Dawley rats).

A laboratory experimental in vitro and in vivo study were conducted with Sprague-Dawley (SD) rats with randomized controlled design with a posttest-only control group design. Fifteen animals were used as research material, divided into 5 groups, negative control group (NCG), positive control group with golden standard hemostatic agent tranexamic acid 5% (TXA), 25% concentration of *Z. mauritiana* leaves extract (ZM25), 50% concentration (ZM50), and 100% concentration (ZM100). The bleeding time and the amount of bleeding were calculated by cutting the tip of the tails of the SD rats. PT, aPTT and TT were measured by taking blood samples from the SD rats. The data analysed using the Shapiro Wilk normality test, normally distributed data followed by a one-way ANOVA test with a significance level ($p < 0.05$), continued with the Post-Hoc test.

The ZM100 group shows a significant difference with NCG, TXA and ZM25 groups in bleeding time. The NCG group shows a significant differences with all samples in the amount of bleeding. The ZM100 group shows a significant difference with all test groups in PT, aPTT and TT test.

The ethanol extract of *Z. mauritiana* leaves can accelerate bleeding time and the amount of bleeding, the extract can also stimulate the acceleration of PT, aPTT and TT factor in the bleeding cascade at high concentrations (100%).

Experimental article (J Int Dent Med Res 2023; 16(4): 1408-1413)

Keywords: Hemostasis, *Ziziphus mauritiana*, Bleeding Time, Prothrombin Time, Activated Partial Thromboplastin Time, Thrombin Time.

Received date: 22 July 2023

Accept date: 24 August 2023

Introduction

Tooth extraction is one of the most frequently performed dental procedures, with bleeding as one of the most common complications.¹ Uncontrolled bleeding can threaten the patient's life and will interfere the dentists when performing tooth extraction procedure.² Incidence of bleeding after tooth extraction can be minimized by systemic or local interventions. Local post-extraction bleeding interventions can be carried out in various ways, some of which are by; pressure tampons, sutures, acrylic splints and the appliance of local hemostasis agents.³

In general, the wound healing process is

divided into four phases, hemostasis, inflammation, proliferation, and remodelling phase.⁴ Hemostasis occurs at the beginning of the wound healing process, followed by an inflammatory phase characterized by swelling and pain, then soft tissue structures re-form in the proliferation phase and end with complete tissue structure restoration in the remodelling phase.^{4,5} Hemostasis (the process of bleeding to stop) is a complex mechanism influenced by interactions between the plasma coagulation cascade, fibrinolytic proteins, the vascular system, and thrombin (platelets).⁶ The process of hemostasis is characterized by the occurrence of vasoconstriction and blood clot formation through activation of platelets and the coagulation cascade.⁷

Indonesia is a country that is rich in a variety of herbal plants that can be used as medicine. One of the plants in Indonesia that has many benefits is the Bidara plant or Indian Jujube plant (*Ziziphus mauritiana*). These plants are

*Corresponding author:

Wiwiek Poedjiastoeti,
Oral and Maxillofacial Surgery Department, Faculty of Dentistry,
Universitas Trisakti, Jakarta, Indonesia.
E-mail: wiwiek@trisakti.ac.id

found in deserts, tropical and subtropical climates country.⁸⁻¹⁰ Dried *Z. mauritiana* leaves are known to contain complex secondary metabolites such as tannins.⁸ In several different tree samples, it was found that the tannin content in *Z. mauritiana* plants had the highest content in the leaves.¹⁰ *Ziziphus mauritiana* is known to have various benefits such as antimicrobial, analgesic, antipyretic, anti-inflammatory and anticancer agent. *Ziziphus mauritiana* works pharmacodynamically and pharmacokinetically by increasing cellular activities, such as migration, proliferation, adhesion, and differentiation to improve wound healing.¹¹ In the phytochemical test and quantification *Z. mauritiana* has secondary metabolites such as alkaloids, flavonoids, saponins, tannins and terpenoids. Bark, fruit flesh and leaves of *Z. mauritiana* are known to have astringent properties so that they can be used to accelerate cessation of bleeding and accelerate wound healing process.^{8,12} The astringent substances contained in some plants have a contraction effect, causing tissues to occur shrinkage.^{13,14}

Tannin is an astringent substance that can precipitate thrombin which will then convert fibrinogen into a collection of fibrin fibers thread in the area of bleeding, these fibrin fibers will become a place for blood clotting proteins to attach so that the coagulation process can be achieved.¹⁵ Tannins are also known to have a vasoconstrictor effect so that bleeding time will be shortened and the wound healing process can be achieved.^{16,17}

As far as the researchers know, there is not much literature discussing the hemostasis activity of *Z. mauritiana* leaves. Based on the descriptions, researchers are interested in researching on the activity of 96% ethanol extract of *Z. mauritiana* leaves against the hemostasis process in experimental animal model study Sprague-Dawley (SD) rats.

Materials and methods

The type of study is laboratory experimental research in vitro and in vivo with randomized controlled design with posttest-only control group. This study was cleared for ethics by the Ethical Commission of the Faculty of Dentistry at Universitas Trisakti (No. 636/S2/KEPK/FKG/2/2023). The study procedures are the preparation of extract ethanol

Z. mauritiana leaves, and phytochemical examination. The next procedures were in vivo and in vitro studies of the hemostasis activity of the 96% ethanol extract of *Z. mauritiana* leaves.

Preparation of *Z. mauritiana* Leaves Extract

Ziziphus mauritiana leaves weighing 4 kg were taken from the Indonesian Medicinal and Aromatic Crops Research Institute (IMACRI) also known as Balittro, the leaves had been dried and identified by the National Research and Innovation Agency (BRIN). The dried powder leaves are macerated in the BioCore Laboratory, Faculty of Dentistry, Universitas Trisakti with 96% ethanol (Supelco-Merck, German) for 3 days and stirred every 4 hours before decanted and filtered. Then, the filtrate was evaporated with a rotary vacuum evaporator (Buchi R-215, Flawil, Switzerland) until a concentrated extract (crude) was obtained. To remove the remaining ethanol, the crude was heated at 45°C, the crude then dissolved with aquadest, and divided into several concentrations, 25%, 50%, and 100% *Z. mauritiana* extract ethanol.

Phytochemical Assay of *Z. mauritiana* Leaves

A phytochemical test was conducted at BioCore Laboratory to identify the active compounds contained in the 96% ethanol extract of *Z. mauritiana* leaves. The phytochemical compounds investigated in this study are flavonoid, steroid, terpenoid, alkaloid, and tannin.

To perceive the flavonoid composition, 5 mL dilute ammonia is added to a portion of an aqueous filtrate of the extract and then 1 mL concentrated sulphuric acid was added, the yellow colouration disappears when left to stand indicates the presence of flavonoids. To perceive steroid composition, 3 drops of concentrated hydrochloric acid and 1 drop of concentrated sulfuric acid are added to 2 mL of the extract, the colour changes to bluish green indicates the presence of steroids. To perceive terpenoid composition, 2 mL of chloroform added to the 1 mL extract and then added 3 mL of concentrated sulfuric acid, the colour changes to reddish brown indicates the presence of terpenoid. To perceive alkaloid composition, dragendorf reagent is added to the extract, the depositions of orangish sediment indicates the presence of alkaloid. To perceive terpenoid. To perceive tannin, 0.1% ferric chloride added to 1 mL sampel, the colour changes to bluish indicates

the presence of tannin.

In Vivo Assessments of Hemostasis

A total of 15 male SD rats were adapted for about 1 week for the acclimatization process, the need to eat and drink ad libitum. Experimental animals were randomly divided into 5 groups (n=3), negative control group (NCG) using 0.9% sodium chloride (NaCl) solution (B. Braun, Melsungen, Germany), positive control group with the golden standard drug tranexamic acid (TXA) solution (Bernofarm, Sidoarjo, Indonesia), treatment group with 25% *Z. mauritiana* leaves extract (ZM25), treatment group with 50% *Z. mauritiana* leaves extract (ZM50) and the treatment group with 100% *Z. mauritiana* leaves extract (ZM100).

The SD rats on each groups were anesthetized with ketamine 40 mg/kg BW (Agrovet Market, Lima, Peru) and xylazine 5 mg/kg BW (Interchemie, Venray, Netherlands). Later, the surgical area was cleaned using a 2% chlorhexidine solution and 1 cm distal segment from the tip of the tail of the rats were amputated with a scalpel blade no 15. Then, 0.1 mL of the solution was applied using an insulin syringe (Onemed, Sidoarjo, Indonesia). A digital chronometer is used to measure how long it takes to achieve hemostasis. Timing begins at the time of incision and stops when the bleeding at the site stops completely. To determine the amount of bleeding, each filtration paper (Whatman - Cytiva, Marlborough, US) was weighed in gram before the procedure with a precision laboratory scale (Sartorius M-Prove, Göttingen, Germany). After the bleeding was achieved, the filtration paper was used to absorb the bleeding that occurred in the wound on the SD rat's tail. This process is carried out until the bleeding stops as indicated by no more blood spots adhering to the filter paper. The difference in the weight of the filtration paper before and after the experiment was considered as the amount of bleeding.

In Vitro Assessments of Hemostasis

In the in vitro study, Prothrombin Time (PT), Activated Partial Thromboplastin Time (aPTT), and Thrombin Time (TT) are the hemostasis factors assessed in this study. Blood samples (n=5) were taken from SD rats in the previous in vivo study, blood sampling was carried out through the aorta and directly added to plastic tubes containing 0.2 mL sodium citrate 3.2% as an anticoagulant in a 1:9 (v/v) ratio to

the blood. Blood samples were centrifuged at 3000 rpm for 10 minutes to separate blood plasma, then the supernatant plasma, which contains platelets, are divided in five sterile tubes for the coagulation test. The coagulation test such as PT, aPTT and TT were examined with reagents kit (Stago, Asnières, French) according to the manufacturer's instructions.

For the PT test, the plasma sample is divided into five tubes, each containing 0.1 mL of plasma which will then be treated by mixing the reagent with the research material. the first tube will only be given reagents as a negative control group, the second tube is given 0.1 mL 5% TXA as a positive control, the third tube is 0.1 mL ZM25, the fourth tube is 0.1 mL ZM50 and the fifth tube is 0.1 mL ZM100, all the tubes were incubated for two minutes at 37°C. Then, 0.2 mL of warmed PT reagent was added to the tube, and the clot formation time was calculated using digital chronometer from the start of the reagent drop until a coagulation formed at the bottom of the tube. The same protocols were delivered for aPTT and TT test depending on the reagents manufacturer's instructions, each protocol was repeated five times and assessed by blind investigators.

Statistical Analysis

The data were analysed using the Shapiro Wilk normality test, normally distributed data followed by a one-way ANOVA test with a significance level ($p \leq 0.05$), continued with the Post-Hoc test.

Results

From the results of the phytochemical test of the ethanol extract of *Z. mauritiana* leaves it was found that it contains active substances such as terpenoids, flavonoids, alkaloids, and tannins, while steroids are absence in this phytochemical test. The results of the phytochemical test are shown in Table 1.

The results of the bleeding time test shows that NCG group is significantly different ($p < 0.05$) with all groups and the ZM100 group shows a significant difference ($p < 0.05$) with the negative control, TXA and ZM25 groups. The results of the bleeding amount test shows the NCG group is significantly different ($p < 0.05$) with all groups (Table 2). In the PT test results, the NCG and TXA groups show a significant difference ($p < 0.05$) with the ZM50 and ZM100

groups. In the aPTT test results, the NCG group and the ZM100 group are significantly difference ($p < 0.05$) with all groups. In the TT test results, the ZM50 group is significantly different with the TXA and ZM100 groups (Table 3).

Metabolit Sekunder	Metode	Hasil Uji
Terpenoid	2mL CHCl ₃ + 3mL H ₂ SO ₄	+
Flavanoid	5mL NH ₃ + 1mL H ₂ SO ₄	+
Steroid	3 drops of CH ₃ COOH + 1 mL H ₂ SO ₄	-
Alkaloid	Dragendorff's reagent	+
Tanin	1 mL FeCl 0.1%	+

Table 1. The phytochemical analysis of 96% ethanol extract of *Ziziphus mauritiana* leaves.

Treatment Group (n=3)	Bleeding Time (s)	Amount Bleeding (g)
NCG	4.11 ± 0.84 ^a	1.74 ± 0.15 ^a
TXA	2.40 ± 0.15 ^b	1.33 ± 0.11 ^b

ZM100	0.94 ± 0.53 ^d	1.32 ± 0.17 ^b

Table 2. Hemostatic analysis of the bleeding time and amount of blood, for the different groups evaluated (in vivo).

Abbreviations: NCG, negative control (NaCl); TXA, positive control (5% Tranexamic Acid); ZM25, 25% concentration of *Z. mauritiana* leaves ethanol extract; ZM50, 50% concentration of *Z. mauritiana* leaves ethanol extract; ZM100, 100% concentration of *Z. mauritiana* leaves ethanol extract.

Note: The values represent the mean values and the standard deviation for the three animals evaluated in each group, different superscript letters (abcd) expressed statistically significant differences ($p < 0.05$) in the lines.

Treatment Group (n=5)	PT (s)	aPTT (s)	TT (s)
NCG	37.58 ± 11.92 ^a	31.13 ± 0.89 ^a	14.64 ± 3.57 ^{abc}
TXA	36.43 ± 2.40 ^{ab}	20.14 ± 3.04 ^b	13.45 ± 2.57 ^b
ZM25	33.67 ± 4.99 ^{abc}	20.75 ± 1.39 ^b	18.78 ± 4.73 ^c
ZM50	26.21 ± 7.32 ^c	20.97 ± 2.69 ^b	21.53 ± 9.95 ^{ac}
ZM100	12.15 ± 1.90 ^d	17.10 ± 1.76 ^c	04.35 ± 2.43 ^d

Table 3. Hemostatic analysis of the PT, aPTT, and TT time, for the different groups evaluated (in vitro).

Abbreviations: NCG, negative control (Reagent); TXA, positive control (5% Tranexamic Acid); ZM25, 25% concentration of *Z. mauritiana* leaves ethanol extract; ZM50, 50% concentration of *Z. mauritiana* leaves ethanol extract; ZM100, 100% concentration of *Z. mauritiana* leaves ethanol extract.

Note: The values represent the mean values and the standard deviation for the three animals evaluated in each group, different superscript letters (abcd) expressed statistically significant differences ($p < 0.05$) in the lines.

Discussion

Ziziphus mauritiana plant is believed to have benefits against various diseases. The potential health benefits of *Z. mauritiana* are known as anti-carcinogenicity, antioxidant, anti-

inflammatory, immune stimulation, anti-obesity, gastrointestinal protective activity, hepatoprotective and inhibitor of foam cell formation in macrophages.¹⁸ In this study, the leaves of *Z. mauritiana* is proven to contain several secondary metabolites such as terpenoids, flavonoids, alkaloids and tannins but not steroids. The findings of this study are in line with previous studies that reported *Z. mauritiana* leaves revealed the presence of alkaloids, terpenoids, phenolic substances, saponins, flavonoids, and tannins. The steroids in the studies are also absence.¹⁹⁻²¹ In several different tree samples, it was found that the tannin content in *Z. mauritiana* plants had the highest content in the leaves.^{10,20}

Tannins can accelerate the wound healing process through several cellular mechanisms, prevent free radicals and reactive oxygen species, promote wound vasoconstriction and increase the activity of forming capillaries and fibroblasts including the proliferation of keratinocytes.^{22,23} Tannins have high hemostasis efficiency because they can conjugate with various proteins in the blood, causing instant coagulation.²⁴ Hemostasis is a process in which bleeding becomes reduced, and blood clots form to prevent further blood loss. Hemostasis occurs in two stages: the primary stage, in which the blood vessels contract causing a platelet plug to form, and the secondary stage, in which the plug is strengthened with fibrin strands to hold the clot in place through activation of the coagulation cascade.²⁵ Therefore, the astringent properties of tannins are expected to stop bleeding in damaged blood vessels, accelerate both the primary and secondary stages of hemostasis so the cessation of bleeding is completely achieved. Primary hemostasis can be assessed by bleeding time and amount of bleeding tests, while secondary hemostasis can be assessed by PT, aPTT and TT tests.²⁶

In this study, the hemostasis activity of the ethanol extract of *Z. mauritiana* leaves was investigated using the rat tail tip amputation model for bleeding time and amount of bleeding test, which is a standard and reliable procedure for assessing the hemostasis properties of a new biomaterial.^{25,27} The bleeding time test shows the negative control (NCG) had the longest bleeding time with 4.11 seconds and showed a significant difference ($p < 0.05$) with all groups. While the ZM100 group was the group with the

fastest bleeding time with 0.94 seconds and showed a significant difference ($p < 0.05$) with the NCG, TXA and ZM25 groups. The results of the bleeding amount test showed that the NCG group had the highest amount of bleeding with 1.74 grams, and showed a significant difference ($p < 0.05$) with all groups.

These results are harmonious with studies investigating the therapeutic properties of tannins in *Z. mauritiana*. Tannins, expressively found in extracts, have demonstrated the ability to control bleeding through their astringent effects on contracting vessels and damaged tissues, accelerating blood proteins and supporting hemostasis.^{21,25,26}

In the PT test shows, the negative control (reagent) and TXA groups show a significant difference ($p < 0.05$) with the ZM50 and ZM100 groups. The ZM100 group is the group with the fastest PT with 12.15 seconds and shows a significant difference ($p < 0.05$) with all groups. In the aPTT test shows, the reagent group was the group with the longest aPTT with 31.13 seconds, and shows a significant difference ($p < 0.05$) with all groups. While the ZM100 group is the group with the fastest aPTT with 17.10 seconds and shows a significant difference ($p < 0.05$) with all groups. In the TT test shows, the ZM50 group is the group with the longest TT with 21.53 seconds, and shows a significant difference with the TXA and ZM100 groups. While the ZM100 group was the group with the fastest TT with 4.35 seconds and shows a significant difference with all test groups.

This shows that the administration of ethanol extract of *Z. mauritiana* leaves can accelerate the process of secondary hemostasis at high concentrations (ZM100) compared to other control groups and lower concentrations. The higher the viscosity of the ethanol extract of *Z. mauritiana* leaves, the higher the composition of the active substance, so that wound healing can be improved due to its anti-inflammatory and antibacterial properties.¹⁹

Based on the results of the study, the ethanol extract of *Z. mauritiana* leaves showed therapeutic potential that could be used as a promising biomaterial for hemostasis agents in the clinical treatment of local bleeding. Further research is needed regarding the activity of the ethanol extract of *Z. mauritiana* leaves in a smaller concentration whether it can maintain the same efficacy and mechanism, and it is also

necessary to carry out clinical trials in humans to confirm the hemostasis potential shown in this study.

Conclusions

The 96% ethanol extract of *Z. mauritiana* leaves can accelerate the cessation of bleeding time and the amount of bleeding, the extract can also stimulate the acceleration of extrinsic (PT) and intrinsic (aPTT) factors of the bleeding cascade, and accelerate the formation of fibrin clot (TT) at a high concentrations so that it can be developed as a topical hemostatic agent.
